

Thinksheet 2.9: Text Bullets

Electricity

Most people use electricity every day. Electricity makes things run. It makes lights light up. It makes computers turn on. It makes televisions play. It powers the heat in our homes. It would be hard to live without electricity.

Electricity powers:

- Lights
- Computers
- Televisions
- Heaters

Cars

People use cars to drive places. Cars can be really big, like a **limousine**. Cars can be really small, like a smart car. Most cars use gas, and some cars use electricity. Almost all cars have:

- Four wheels
- Windows
- A steering wheel
- Headlights

The Model T
Henry Ford began selling Model T Fords in 1908. Not many people had cars in 1908, but a lot that did have cars owned Model Ts.

Bicycles

Bicycles can help people go places, too. They don't use gas or electricity; they use human power (or kid power, when kids ride them!).

Bicycles have:

- Two wheels
- Handlebars
- Brakes

There are many different types of bicycles, including road bikes, mountain bikes, and beach bikes.
